

# HOW DOES CRACK COCAINE AFFECT THE BRAIN?

**How does cocaine become crack?**

**COCAINE PLANT**  
Cocaine is produced from the shrub-like bushy tree from the forest of the coca plant native to South America.

**COCAINE**  
The powdered form of cocaine is smoked through the nose, where it is absorbed through the nasal tissue.

**SMOKED**

**CRACK**  
The same refers to the smoking speed heard when the crack is heated and smoked.

**+ Baking Soda**  
Crack is made from cocaine paste called *pasta base*, or which cocaine is cooked with ammonia or baking soda to create crack from that cocaine powder.

**What happens when crack vapor is inhaled?**

The vapors of the crack are absorbed through the lungs, into the bloodstream, and transported to the brain within 10 to 15 seconds.

**How does crack affect the brain?**

Dopamine is released by neurons in the nucleus accumbens that are involved in pleasure and reward. Cocaine blocks the reuptake of dopamine and increases its levels in the brain.

Neurotransmitters are chemical messengers that carry signals between nerve cells. Cocaine blocks the reuptake of neurotransmitters, increasing their levels in the brain.

**How does dopamine travel through the brain?**

Chemical messengers travel in sacs or vesicles between nerve cells, called axons, and back to a receptor on a neighboring nerve cell after called a synapse. This creates a signal to that nerve cell, which produces a good feeling.

**How does crack interrupts this cycle?**

Crack interrupts this cycle. It attaches to the dopamine receptors preventing the normal reuptake process. Dopamine then builds up in the gap between neurons, creating a lingering feeling of pleasure or euphoria to the user.

**How smoking cocaine can lead to addiction?**

Crack's rapid rush - 1 to 7 seconds of intense pleasure - quickly subsides, leading to depression that needs to be relieved by more crack. This cycle enhances the chance of addiction.

**What are the effects of crack addiction?**

ADDITION leads to PARANOIA, INSOMNIA, and ANOREXIA.

ADDITION leads to DEPRESSION, ANXIETY, and SUICIDE.

Most smokers, addiction to cocaine can also result in cardiac arrest, stroke and death.
